DESCRIPTION:

A panel of expert clinical researchers offer a practical guide to the key animal models used in vascular disease. These experts examine critical issues related to vascular disease and injury in five major areas: acute mechanical injury and vascular repair, arterial thrombosis, chronic atherosclerosis, vascular disease in transplanted vessels, and vascular disease in systemic and pulmonary arterial hypertension. Up-to-date and highly practical, *Vascular Disease and Injury: Preclinical Studies* provides a comprehensive review that not only illuminates the current status of cardiovascular research, but also offers vascular biologists and cardiologists a detailed how-to guide to the development of the many powerful new therapeutics now emerging.

CONTENTS:

PART I ACUTE MECHANICAL INJURY AND VASCULAR REPAIR

- 1 Mechanical Injury in Normal and Atherosclerotic Rabbit Iliac Arteries
- 2 The Porcine Model of Coronary Restenosis
- 3 Atherosclerotic Porcine Coronary Stent Model: Technical Methods for Preclinical Studies
- 4 Nonhuman Primate Models of Arterial Injury and Repair
- 5 Experimental Models of Arteriovenous Grafting
- 6 Wire Denudation and Ligation Models of the Mouse Carotid Artery
- 7 Endothelial Denudation and Arterial Dilatation in the Mouse
- 8 Vascular Photochemical Injury in the Mouse
- 9 Mouse Model of Transluminal Femoral Artery Injury

PART II MODELS OF ARTERIAL THROMBOSIS

- 10 A Murine Model of Arterial Injury and Thrombosis
- 11 Folts Cyclic Flow Animal Model for Studying In Vivo Platelet Activity and Platelet Interactions with Damaged Arterial Walls

PART III CHRONIC ATHEROSCLEROTIC MODELS

- 12 Mouse Models of Atherosclerosis
- 13 Rabbit Models of Atherosclerosis
- 14 Atherosclerosis in Nonhuman Primates

PART IV VASCULAR DISEASE IN TRANSPLANTED VESSELS

- 15 Murine Carotid Loop Model of Transplant Vascular Disease
- 16 Murine Heterotopic Model of Transplant Arteriopathy
- 17 Hyperacute Vascular Rejection: Lessons from Pig-to-Primate Xenotransplantation

PART V VASCULAR DISEASE IN MODELS OF ARTERIAL HYPERTENSION

- 18 Methods for Examining Cerebrovascular Disease in Experimental Models of Hypertension
- 19 Monocrotaline-Induced Pulmonary Hypertension in Rats
- 20 Chronic Pulmonary Hypertension in the Hypoxic Rat and in the Sheep Following Continuous Air Embolization

PART VI ANIMAL CARE AND TISSUE PROCESSING

- 21 Veterinary Issues and Anesthesia Options
- 22 Histological and Immunohistochemical Methods for Vascular Animal Model Studies
