**DESCRIPTION:**

Panoramic Ophthalmoscopy: Optomap® Images and Interpretation comprehensively covers the state-of-the-art technology and the high-resolution digital images taken with the Panoramic200 Scanning Laser Ophthalmoscope. The optomap® Retinal Exam images provide ophthalmologists and optometrists with an extended view and photo-documentation of almost the entire retina.

Inside Panoramic Ophthalmoscopy, Jerome Sherman, Gulshan Karamchandani, William Jones, Sanjeev Nath, and Lawrence A. Yannuzzi document and expertly explain all there is to know about this remarkable new technology. Over 500 images highlight the text, many of which have never been seen before, and provide detailed visual references for numerous eye disorders. This colorful atlas is the ideal resource for interpreting these images and diagnosing serious eye conditions that may have otherwise gone undetected.

Panoramic Ophthalmoscopy contains an introductory chapter that highlights and contrasts panoramic ophthalmoscopy and optomap® images to all the traditional methods of fundus viewing. Inside you will find over 100 exemplary case presentations covering common and uncommon topics such as normal fundus, retinal tears, Coat's disease, and diabetic retinopathy. Also included are cases of retinal and choroidal diseases and how they were diagnosed and managed using this technology. In the last chapter, the authors peer into the next frontier of imaging by introducing Optos fluorescein angiography and its myriad potential contributions to patient care, research, and clinical teaching.

**CONTENTS:**

1. Optic Disc.
2. Macula.
3. Myopia.
4. Vascular.
5. Inflammatory.
6. Mass Lesions.
7. Detachments.
8. Retinal Degenerations.
9. Vitreous.
10. Peripheral Lesions.
11. The Next Frontier.
