

CRITICAL CARE NEPHROLOGY

	Autor:	Ronco	
	ISBN:	9780323449427	
	Páginas:	1456	
	Año:	2018	
	Edición:	3	
	Idioma:	Ingles	
Disponible:	De 7 a 10 Días		
Precio:	312.00 296.40	Iva no incluido	

DESCRIPTION:

Comprehensive and clinically relevant, the 3rd Edition of Critical Care Nephrology provides authoritative coverage of the latest advances in critical care procedures for patients with renal diseases or disorders. Using common guidelines and standardized approaches to critically ill patients, this multidisciplinary reference facilitates better communication among physicians who care for critically ill patients suffering from kidney disease, electrolyte and metabolic imbalances, poisoning, severe sepsis, major organ dysfunction, and other pathological events.

Key Features:

- Offers detailed discussions of different forms of organ support, artificial organs, infections, acute illness occurring in chronic hemodialysis patients, and much more.
- Places a special emphasis on therapeutic interventions and treatment procedures for a hands on clinical reference tool.
- Presents information clearly, in a format designed for easy reference - from basic sciences to clinical syndromes to diagnostic tools.
- Covers special populations such as children, diabetic patients, and the elderly.
- An exceptional resource for nephrologists, intensivists, surgeons, or critical care physicians - anyone who treats critically ill renal patients.

New to this Edition:

- Shares a combined commitment to excellence lead by Drs. Claudio Ronco, Rinaldo Bellomo, John Kellum, and Zaccaria Ricci - unparalleled leaders in this field.
- Addresses key topics with expanded coverage of acute kidney injury, stress biomarkers, and sepsis, including the latest developments on mechanisms and management.
- Provides up-to-date information on extracorporeal therapies from new editor Dr. Zaccaria Ricci.
- eBook version included with purchase. This enhanced eBook experience allows you to search all of the text, figures, and references from the book on a variety of devices.

CONTENTS:

Section 1: Principles of Critical Care

1. The Critically ill patient
2. The Pathophysiological Foundations of critical care
3. Pulmonary support in the critically ill
4. Hemodynamic support in the critically ill patient
5. Monitoring of organ function in critical care
6. Kidney-Specific Severity Scores

Section 2: Principles of Renal Physiology

7. Practical Considerations of Renal Biopsies in Critical Care Patients
8. Tubular physiology
9. Glomerular Filtration Rate, Renal Functional Reserve and Kidney Stress Testing
10. Renal energy consumption and metabolism

Section 3: Epidemiology of AKI in critical care

11. Acute Kidney Injury: from clinical to molecular diagnosis
12. Community and hospital acquired Acute Kidney Injury
13. Epidemiology of Acute Kidney Injury in critically ill patients
14. AKI in patients with CKD

Section 4: Exposures and patient susceptibility

15. Genetic predisposition to AKI
16. Risks Factors and Risk Assessment in Acute Kidney Injury
17. Experimental Models of Acute Kidney Injury

Section 5: Humoral and cellular mechanisms of kidney damage

18. Renal blood flow and perfusion pressure
19. Humoral mediators in sepsis

20. Cell Death Pathways: Apoptosis and Regulated Necrosis
21. Pathogen Associated Molecular Patterns (PAMPs), Damage Associated Molecular Patterns (DAMPs), and their receptors in Acute Kidney Injury

Section 6: Clinical course of AKI and Biomarkers

22. AKI continuum: the conceptual model of AKD
23. Acute Kidney Disease, Renal Recovery and Post AKI Care
24. The role of biomarkers in AKI diagnosis and management
25. Functional biomarkers
26. Damage biomarkers
27. Stress biomarkers

Section 7: Mechanisms of repair or progression

28. The process of repair after AKI
29. Maladaptive repair and progression to CKD
30. Biomarkers of recovery and/or repair following Acute Kidney Injury

Section 8: SECTION 8: Renal Histopathology in AKI

31. Renal Biopsy in AKI
32. Localization of injury and repair pathways

Section 9: Imaging techniques in Critical Care Nephrology

33. Ultrasonography and Doppler techniques
34. Contrast enhanced renal ultrasound
35. TRADITIONAL RADIOLOGY, COMPUTED TOMOGRAPHY AND MAGNETIC RESONANCE IMAGING IN CRITICAL CARE NEPHROLOGY
36. Radionuclide diagnostic techniques

Section 10: Clinical Syndromes and AKI

37. Multiple organ dysfunction syndrome
38. AKI in Burns and Trauma
39. Drug-Induced Acute Kidney Injury
40. Acute Kidney Injury in Pregnancy
41. AKI in oncology and tumour lysis syndrome
42. AKI in cardiac surgery
43. AKI in major surgery
44. Acute Kidney Injury in Heart Failure
45. AKI in CIRRHOSIS
46. AKI in kidney transplantation
47. Acute glomerulonephritis
48. Contrast-induced Acute Kidney Injury
49. Abdominal compartment syndrome
50. HEMOLYTIC UREMIC SYNDROME

Section 11: Prevention and Treatment: General Treatment Concepts

51. Non-pharmacological prevention of AKI
52. Novel Drugs for AKI
53. Remote Ischemic Preconditioning

Section 12: Fluid and Electrolytes

54. Blood Biochemistry: Measuring Major Plasma Electrolytes
55. Assessment of Urine biochemistry
56. Disorders of Sodium and Water Balance
57. Disorders of Potassium and Magnesium
58. Calcium and Phosphate Physiology
59. Principles of Fluid Therapy
60. Blood and Blood Products
61. Loop and thiazide Diuretics
62. Vaptans and the treatment of hyponatremia
63. Aldosterone antagonists and other potassium sparing diuretics

Section 13: Acid-Base

64. Laboratory tests: blood gases, anion gap, strong ion gap
65. Acid Base physiology and diagnosis of disorders
66. Metabolic Acidosis
67. Hyperlactatemia and lactic acidosis
68. Renal Tubular Acidosis (RTA)
69. Metabolic alkalosis
70. Respiratory acid-base disorders
71. Iatrogenic and poison-derived acid base disorders

Section 14: Metabolism and nutrition in critical illness and AKI

72. Energy requirement and consumption in the Critically Ill Patient
73. Metabolic aspects of RRT
74. Amino acid turnover, Protein metabolism and Nitrogen balance in Acute Kidney Injury
75. Carbohydrates and Lipids
76. Endocrinology of stress response to critical illness
77. Anemia of critical illness
78. Management of Nutrition in AKI and RRT
79. Blood Glucose Control in Critical Care

80. Enteral Nutrition

Section 15: Infectious diseases and Sepsis

81. Microbiological Considerations in the Intensive Care Patient
82. Innate Immunity and the Kidney
83. Adaptive immunity and Critical Illness
84. Spontaneous Bacterial Peritonitis and Hepatorenal Syndrome
85. Tropical Infections Causing Acute Kidney Injury
86. The Sepsis Syndrome and septic shock
87. Complement and its Consequences in Sepsis
88. Coagulation abnormalities in sepsis
89. Endothelial dysfunction in sepsis
90. The kidney in sepsis and Mechanisms of AKI
91. Recommendation for sepsis management
92. Antibiotic Prescription in ICU and AKI
93. Renal Replacement Therapy in Septic AKI
94. Blood purification therapies for sepsis
95. Management of infection in patients with kidney transplant
96. Viral infections in the ICU
97. Management of antibiotic-resistant infections

Section 16: Acute Intoxication and Poisoning

98. Characteristics, Pathophysiology, and Effects of Common Toxic Substances
99. Drugs and Antidotes in Acute Intoxication and Laboratory Testing in Toxicology
100. Extracorporeal therapies in Acute Intoxication and Poisoning
101. Plasmapheresis in Acute Intoxication and Poisoning
102. Poisoning: Kinetics to Therapeutics

Section 17: AKI and Organ Crosstalk

103. Bleeding and hemostasis in AKI
104. Gastrointestinal Complications of Acute Kidney Injury
105. Cardiovascular problems in AKI
106. Water and electrolyte disorders in AKI
107. Neurological problems in AKI
108. Immunological and infectious complications of AKI
109. Cellular response to AKI

Section 18: The heart and the kidney

110. Heart kidney crosstalk
111. Cardiorenal Syndrome Classification
112. Cardiorenal Syndrome type 1
113. Cardiorenal Syndrome type 2
114. Cardiorenal Syndrome type 3
115. Cardiorenal Syndrome type 4
116. Renal Function during Cardiac Mechanical Support and the Artificial Heart
117. The kidney in diastolic dysfunction
118. Principles of Volume Management in Congestive Heart Failure and Cardiorenal Syndrome
119. Management of overhydration in heart failure patients
120. Recent advances for stroke prevention in patients with atrial fibrillation and advanced kidney disease

Section 19: The lung and the kidney

121. Lung-kidney crosstalk
122. The Kidney during Mechanical Ventilation
123. ECMO and renal function
124. Extracorporeal CO₂ removal
125. ECMO and CRRT in adult and children
126. Pulmonary Renal Syndromes

Section 20: The Liver and the Kidney

127. Liver-Kidney Interaction
128. Pathophysiology & management of the Hepatorenal Syndrome
129. Kidney Dysfunction after Liver Transplantation
130. Extracorporeal Liver Support and the Kidney

Section 21: The Brain and the Kidney

131. Treatment of Combined AKI and Cerebral Edema
132. Renal Protection in the Organ Donor
133. Effect of Extracorporeal Therapies on the Brain

Section 22: Fluid balance and its management in the critically ill

134. Components of fluid balance and monitoring
135. Methods of estimation of fluid status
136. The five B approach to fluid management
137. Mechanical fluid removal

Section 23: General principles of Acute renal replacement therapy

138. Indications for Renal Replacement Therapy in the Critically Ill
139. Principles of Extracorporeal Circulation and mass separation
140. Membranes and Filters for Use in Acute Renal Failure
141. Evolution of Machines for Acute Renal Replacement Therapy

142. Principles of Anticoagulation in Extracorporeal Circuits
143. Dialysis solutions and replacement fluids
144. Starting and Stopping Renal Replacement Therapy in the Critically Ill
145. The Concept of Renal Replacement Therapy Dose and Efficiency
146. Quantification of Acute Renal Replacement Therapy
147. Principles of Pharmacodynamics and Pharmacokinetics of Drugs Used in Extracorporeal Therapies
148. Ethical Considerations in Acute Renal Replacement Therapy

Section 24: Intermittent renal replacement therapies (IRRT)

149. Intermittent Techniques for Acute Dialysis
150. Solute and water transport in hemodialyzers, flow distribution and crossfiltration
151. Biocompatibility of the Dialysis System
152. Composition of Hemodialysis Fluids
153. Indications for and Contraindications to Intermittent Hemodialysis in Critically Ill Patients
154. Technical and Clinical Complications of Intermittent Hemodialysis in the Intensive Care Unit
155. Correction of Water, Electrolyte, and Acid-Base Derangements by Hemodialysis and Derived Techniques
156. Urea Kinetics, Efficiency, and Adequacy of Hemodialysis and Other Intermittent Treatments
157. Assessment of Fluid Status and Body Composition and Control of Fluid Balance with Intermittent Hemodialysis in the Critically Ill Patient
158. Outcome of Intermittent Dialysis in Critically Ill Patients with Acute Renal Failure
159. Hybrid Dialysis Techniques in the Intensive Care Unit
160. Plasma exchange in acute illness
161. Cascade filtration for ABO incompatible transplant
162. Nursing Issues and Procedures in acute dialysis

Section 25: Continuous Renal replacement therapies (CRRT)

163. Indications for CRRT: renal replacement versus renal support
164. Beginning and Ending CRRT in the Intensive Care Unit
165. Solute and Water Kinetics in Continuous Therapies
166. CRRT: modalities and their selection
167. Vascular access for renal replacement therapy in AKI patients
168. Anticoagulation Strategies for CRRT and citrate
169. Nursing Strategies to Prevent Coagulation in CRRT
170. Adequacy of CRRT: Prescription and delivery
171. High-Volume Hemofiltration in the Intensive Care Unit
172. Pulse High-Volume Hemofiltration in Management of Critically Ill Patients with Sepsis or Septic Shock
173. High cut off membranes for mediators removal
174. Clinical Effects of Continuous Renal Replacement Therapies
175. Antibiotic adjustment in CRRT
176. Nomenclature: Basic principles
177. Nomenclature: Techniques

Section 26: Peritoneal Dialysis in critical illness

178. Peritoneal Dialysis in the Intensive Care Unit
179. Indications, Contraindications, and Complications of Peritoneal Dialysis in Acute Renal Failure
180. Solute and Water Transport across the Peritoneal Membrane
181. Choice of Peritoneal Dialysis Technique: Intermittent or Continuous
182. Correction of Fluid, Electrolyte, and Acid-Base Derangements by Peritoneal Dialysis in Acute Kidney Injury
183. Efficiency and Adequacy of Peritoneal Dialysis in Acute Renal Failure
184. Clinical Results and Complications of Peritoneal Dialysis in Acute Renal Failure
185. Treatment of Peritonitis and Other Clinical Complications of Peritoneal Dialysis in the Critically Ill Patient
186. Comparison of Peritoneal Dialysis with Other Treatments for Acute Renal Failure
187. Techniques and technology of Continuous-Flow Peritoneal Dialysis as Acute Therapy
188. Nursing Issues and Procedures in Acute Peritoneal Dialysis

Section 27: Extracorporeal Blood Purification Techniques beyond Dialysis

189. Plasmapheresis
190. Sorbents and Hemoperfusion techniques
191. Therapeutic apheresis in critically ill patients: indications, modalities and techniques, clinical results.
192. MARS and extracorporeal liver support
193. Coupled Plasmafiltration-Adsorption
194. The Prometheus System
195. Toraymyxin and Other Endotoxin Adsorption Systems
196. The Plasmafiltration-Adsorption-Dialysis System
197. Extracorporeal membrane oxygenation for cardiac support
198. Extracorporeal membrane oxygenation for pulmonary support
199. Cell Based Therapies

Section 28: Critical Care Nephrology in Pediatrics

200. Pathophysiology of Pediatric Acute Kidney Injury
201. Epidemiology of Pediatric Acute Kidney Injury
202. Treatment of Acute Kidney Injury in Children: Conservative Management to Renal Replacement Therapy
203. Technical Aspects of Pediatric Continuous Renal Replacement Therapy
204. Multiple Organ Dysfunction in the Pediatric Intensive Care Unit
205. Drug Dosing in Pediatric Acute Kidney Insufficiency and Renal Replacement Therapy
206. Nutrition of Critically Ill Children with Acute Renal Failure

207. Continuous Renal Replacement Therapies in Combination with Other Extracorporeal Therapies
208. Outcome of Pediatric Acute Kidney Injury
209. Renal Replacement Therapy for the Critically Ill Infant
210. Inborn Errors of Metabolism and Continuous Renal Replacement Therapy
211. Modified Ultrafiltration in Pediatric Heart Surgery
212. Techniques and machines for Pediatric RRT
213. Antibiotics in critically ill newborns and children: nephrotoxicity and management during RRT

Section 29: Kidney Transplantation

214. Patient Selection and Pretransplantation Care for Kidney Transplant Recipients
215. Kidney Support and Perioperative Care in Kidney Transplantation
216. AKI in Kidney Transplant Recipients

Section 30: Special Kidney Problems in the Intensive Care Unit

217. Management of CKD and ESKD patients in the ICU
218. Management of AKI in Patients with Diabetes in the Intensive Care Unit
219. Diagnosis and Management of AKI in the Emergency Room
220. Anticancer Drugs and the Kidney
221. Anti-inflammatory Drugs and the Kidney
222. Calcineurin Inhibitors and Other Immunosuppressive Drugs and the Kidney
223. Alternative Medicine and Chinese Herbs and the Kidney
224. Environment, Smoking, Obesity, and the Kidney
225. Lead and Heavy Metals and the Kidney
226. Statins and the Kidney
227. Erythropoietin Therapy in Critically Ill Patients and AKI
228. Vasoactive Drugs and Renal Function
229. End points for clinical trials in AKI
230. Hypothermia and the kidney
231. ACEI and AKI

Author Information:

By **Claudio Ronco**, MD, Divisione di Nefrologia, Ospedale San Bortolo, Vicenza, Italy **Rinaldo Bellomo**, MBBS(Hons), MD, FRACP, FCCP, Chairman, Australian and New Zealand Intensive Care Society Clinical Trials Group Director of Intensive Care Research, Department of Intensive Care, Austin & Repatriation Medical Centre, Melbourne, Victoria, Australia **John A. Kellum**, MD, UPMC Presbyterian, Pittsburgh, PA and **Zaccaria Ricci**
