DESCRIPTION:

An interdisciplinary guide to color duplex sonography organized by anatomic region

The indications for vascular color duplex sonography (CDS) have expanded in recent years due to the availability of power Doppler, B-flow, ultrasound contrast agents, 3D reconstruction techniques and fusion with other imaging modalities. CDS enables close-interval follow-ups after interventional procedures with improved prognoses. Edited by Reinhard Kubale, Hubert Stiegler, and Hans-Peter Weskott, Vascular Color Duplex Ultrasound starts with the basic principles of diagnostic ultrasound physics and technology, followed by invaluable tips on equipment settings, possible artifacts, and limitations hemodynamic essentials and the use of ultrasound contrast agents. Subsequent chapters organized by anatomic region provide updated coverage on all peripheral and abdominal arterial and venous vascular regions microcirculation and tumor perfusion kidney and liver disease the use of contrast-enhanced ultrasound (CEUS) in biliary, intestinal, splenic, and pediatric diseases and novel/future techniques.

- Contributions from interdisciplinary experts in angiology, neurology, radiology, vascular surgery, gastroenterology, nephrology, phlebology, rheumatology, laser medicine, and physics
- In-depth guidance on examination techniques, findings, and potential pitfalls and how to avoid them
- A wealth of comparative CT, MRI, and angiography CDS images and 37 videos enhance understanding of impacted anatomy, and the ability to master techniques and make accurate diagnoses
