DESCRIPTION:

Part of the renowned Braunwald family of references, *Clinical Arrhythmology and Electrophysiology: A Companion to Braunwald's Heart Disease* provides today's clinicians with clear, authoritative guidance on every aspect of the latest diagnosis and management options for patients with arrhythmias. This comprehensive reference on cardiac arrhythmias lays a solid foundation of the underlying mechanisms of cardiac electrophysiology with an emphasis on identifying, understanding, and treating individual arrhythmias. Now fully updated from cover to cover, and carefully written to provide continuity and a consistent message throughout, the 4th Edition offers unparalleled coverage of cardiac arrhythmias in an accessible and user-friendly manner.

Key Features:

- Grounds clinical techniques in basic science for managing patients with complex arrhythmia disorders.
- Offers increased clinical content with complete diagnostic and management options, including the latest drug-based, device-based, and device-drug therapies.
- Covers new tools and techniques for atrial transseptal and percutaneous pericardial access, new ablation energies and tools, and new ACC/HRS guidelines for bradyarrhythmias.
- Contains a new chapter on stroke prevention in atrial arrhythmias.
- Includes significant content updates on macro-reentrant atrial tachycardias in an era of ultra-high-resolution mapping, new mapping and ablation technologies for ventricular tachycardia, new genetic mechanisms underlying arrhythmia syndromes, and much more.
- Provides access to dozens of videos depicting key mapping techniques, and fluoroscopy images illustrating techniques for electrophysiologic catheter positioning, and atrial septal puncture, as well as pericardial access, cryoablation, and left atrial appendage exclusion procedures.
- Uses a consistent format throughout, showing every arrhythmia in a similar manner for quick reference.
- An eBook version is included with purchase. The eBook allows you to access all of the text, figures and references, with the ability to search, customize your content, make notes and highlights, and have content read aloud.

CONTENTS:

- 1 Introduction
- 2 Molecular Mechanisms of Cardiac Electrical Activity
- 3 Cardiac Ion Channels
- 4 Electrophysiological Mechanisms of Cardiac Arrhythmias
- 5 Electrophysiological Testing: Tools and Techniques
- 6 Conventional Intracardiac Mapping Techniques
- 7 Advanced Mapping and Navigation Modalities
- 8 Ablation Energy Sources
- 9 Sinus Node Dysfunction
- 10 Atrioventricular Conduction Abnormalities
- 11 Intraventricular Conduction Abnormalities
- 12 Focal Atrial Tachycardia
- 13 Typical Atrial Flutter
- 14 Macroreentrant Atrial Tachycardia
- 15 Atrial Tachyarrhythmias in Adults With Congenital Heart Disease
- 16 Atrial Fibrillation: Pathophysiology and Epidemiology
- 17 Atrial Fibrillation: Clinical Presentation and Evaluation
- 18 Atrial Fibrillation: Management
- 19 Atrial Fibrillation: Stroke Prevention Strategies
- 20 Inappropriate Sinus Tachycardia
- 21 Atrioventricular Nodal Reentrant Tachycardia
- 22 Typical Atrioventricular Bypass Tracts
- 23 Atypical Bypass Tracts
- 24 Paroxysmal Supraventricular Tachycardias
- 25 Wide Complex Tachycardias
- 26 Ventricular Arrhythmias in Ischemic Heart Disease
- 27 Idiopathic Focal Ventricular Tachycardia
- 28 Idiopathic Fascicular Reentrant Ventricular Tachycardia
- 29 Ventricular Tachycardia in Nonischemic Dilated Cardiomyopathy
- 30 Bundle Branch Reentrant Ventricular Tachycardia
- 31 Epicardial Ventricular Tachycardia
- 32 Arrhythmias in Hypertrophic Cardiomyopathy
- 33 Ventricular Tachycardia in Inherited Arrhythmogenic Cardiomyopathy
- 34 Ventricular Arrhythmias in Adults With Congenital Heart Disease
- 35 Ventricular Arrhythmias in Inherited Channelopathies
- 36 Complications of Catheter Ablation of Cardiac Arrhythmias
