### DESCRIPTION:

This book provides a detailed update on all aspects of fine-needle aspiration cytology of breast lesions. It will serve as an up-to-date reference and atlas on new entities in breast pathology, including classic benign and malignant lesions, in accordance with current classification schemes and staging protocols. Emphasis is placed on description of characteristic diagnostic features as well as common cytological pitfalls. Correlation of cytology with histology is achieved through cyto-histological illustrations, enabling readers to gain a good understanding of the morphologic features of various lesions. Core-needle biopsy and fine-needle aspiration cytology are compared in depth, with attention to their relative strengths and weaknesses and indications. In addition, the impact of molecular classification of breast cancers on cytologic diagnosis is explored, and the use of molecular techniques and artificial intelligence in diagnostic cytology is discussed.

### CONTENTS:

1. Anatomy and Physiology of the Breast
2. Basic Histopathology of Breast Lesions
3. Aspiration Techniques
4. Liquid-Based Cytology and Cell Block in Breast Lesions
5. Breast Fine Needle Aspiration Cytology: Introduction to the Yokohama Classification
6. Inflammatory Lesions of the Breast
7. Fibrocystic Changes and Cysts
8. Fibroadenoma
9. Other Fibroepithelial Lesions
10. Cytology of Epithelial Proliferative Lesions and High-Grade Ductal Carcinoma In Situ
11. Papillary Lesions of the Breast
12. Mucinous Lesions
13. Carcinoma and Variants
14. Other Uncommon Lesions
15. Assessment of Axillary Nodes
16. Special Ancillary Techniques: Immunohistochemistry
17. Molecular Studies and Artificial Intelligence
18. Comparison of Aspiration and Core Needle Biopsy
19. Future Directions
